The Changing Face of GRC

The concept of GRC has been around for ages. Whether they realize it or not, all business houses have certain governance, risk and compliance management guidelines in place. However, in most enterprises, the three elements of GRC are treated as separate business practices and not as an integrated whole. Also, several enterprises still follow traditional, old-school GRC practices.

We're now in the twenty first century where businesses operate in challenging and critical dynamics; and where technology impacts business operations significantly. This eventually means that in order to keep up with changing business dynamics and to optimize business performances, enterprises need to review and refine their GRC guidelines, upgrade to modern GRC practices and have a strategic and standard approach to GRC, instead of a scattered and chaotic methodology.

Governance, Risk and Compliance – The Modern Approach

The concept of governance, risk and compliance has changed phenomenally over the years, and so has the importance of adopting modern and sophisticated GRC practices.

Today, GRC is seen as an integrated set of business practices carried out to ensure that an organization can function effectively and efficiently while eliminating risk and ensuring compliance with internal and external regulations. Modern enterprises combine the three pillars of GRC into one unified business practice.

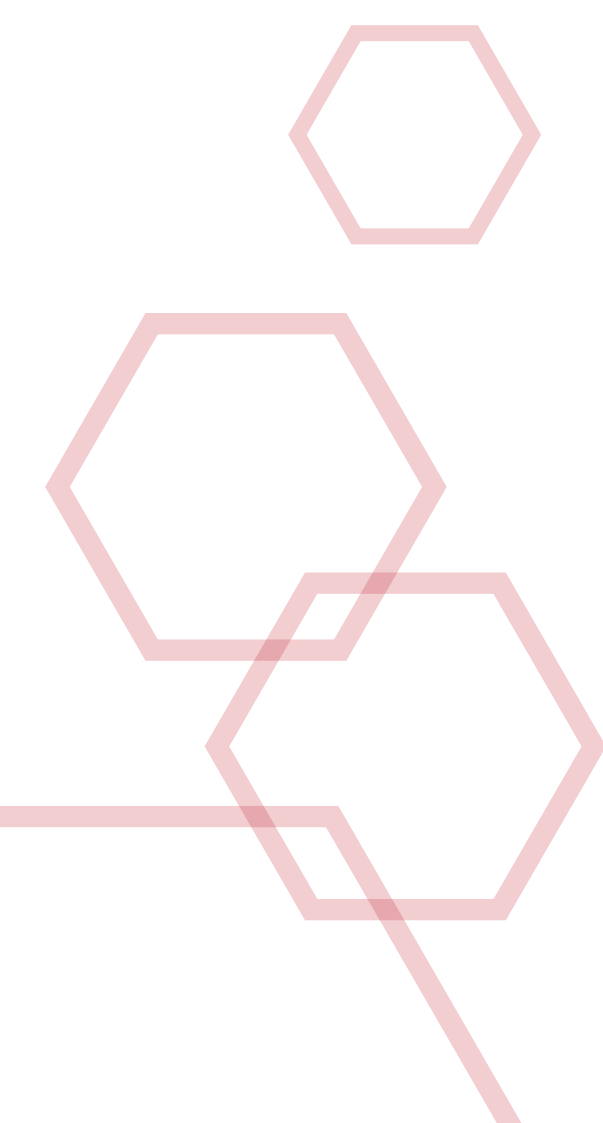

Governance The combination of processes that reflect the organization's structure and operations, and how these processes are executed across the board.

Risk Proactive prediction and management of risks that could prevent the organization from achieving its objectives.

Compliance Practices that ensure that the company's policies and procedures, laws and regulations are adhered to across the entire organization.

Enterprises now have the option to consult expert GRC practitioners and seek strategic advice on how to design a best-fitting GRC framework. Additionally, there are several governance, risk and compliance management software solutions in the market which help businesses automate redundant business processes and improve performance.

Estuate's GRC Center of Excellence

Estuate integrates all the three pillars of GRC under one umbrella to help businesses scale up efficiencies

Corporate Governance

Corporate Governance refers to the basic principles, guidelines and policies that govern a company's people and processes. Estuate's GRC consultants understand your primary business objective and current business processes. They help you define and develop standard company policies and business procedures to align with your business model.

Enterprise Risk Management

Enterprise Risk Management is a set of measures taken by a business to identify, prevent and minimize internal and external risks. Estuate's automated and Cloud-based risk management solutions help businesses track, monitor and measure enterprise risk and prevent it with guided analytical insights.

Compliance Management

Compliance Management ensures that all people in an organization strictly adhere with predefined business principles and guidelines. Estuate's audit and compliance management solutions help you monitor business practices and ensure that they are carried out as per standards.
